Objective Based Instruction

The process of instruction helps to achieve certain immediate goals which leads the learner nearer to the ultimate goal of education. These objectives are attainable as a result of classroom teaching.

Objectives serves as a foundation for meaningful and effective teaching. The teacher knows what his pupil will do or how they will behave after the classroom instruction is over. Thus the **objectives makes teaching goal oriented** and purposeful. This is called objective based approach to instruction.

- Teacher should clearly define his **objectives**.
- Appropriate **learning experience** must be provided for attaining the objectives
- Degree of realization of objective can be **evaluated** in terms of behavioural change produced. ie evaluation of learning objectives gained from learning activities as part of instruction.

Thus the **OBJECTIVE** serves as the basis for planning learning activities resulting in **LEARNING EXPERIENCE** as well as for **EVALUATING** the quality of learning achieved.

Education is an objective oriented triangular process.
The interrelationship of the three may be represented as

- Learning experience is based on objective
- Objectives get clarified by learning experience
- Evaluation is based on objectives.
- Objectives get clarified by evaluation. (Attainment)
- Evaluation gives evidence on learning experience. (effectiveness of learning)
- Learning experience gives hint to the nature of situation for evaluation.
